

Governed Agentic Automation Factory

Supplemental evidence for UiPath AgentHack judges

Supplemental UiPath Environment Evidence Packet

Field	Value
Project	Governed Agentic Automation Factory
Hackathon	UiPath AgentHack
Track	Track 2: UiPath Maestro BPMN
Public repository	https://github.com/AbhinavGupta707/Ui-Path-Agent-Factory
Prepared	2026-06-30
Primary local product URL	http://localhost:5183
Customer360 preview URL	http://localhost:5184

Purpose

The Devpost form asks for the UiPath Labs link/environment URL where the solution was built. The separate UiPath Labs staging sandbox URL was not provisioned before the access-request window closed. The project was built, verified, and documented in a UiPath Automation Cloud organization owned by the submitter.

This packet does not claim to replace an organizer-assigned staging sandbox. It provides the practical review evidence judges need to inspect the UiPath side of the project: organization, tenant, folder, UiPath components, proof IDs, read-only verification commands, setup path, and safety boundaries.

Recommended Devpost Environment Field

If the Devpost form requires the environment URL and the assigned Labs staging URL is not available, use the Automation Cloud organization URL and attach this evidence pack:

```
https://cloud.uipath.com/galacticus/
```

Tenant deep link:

```
https://cloud.uipath.com/galacticus/DefaultTenant/
```

Suggested Devpost note:

```
UiPath Labs staging access was not provisioned before the sandbox window closed,
so I built and verified the project in my Automation Cloud org instead:
https://cloud.uipath.com/galacticus/. The supplemental evidence packet includes
org, tenant, folder, proof IDs, verification commands, and UiPath component
mapping for judges.
```

Requirement Interpretation

The official UiPath AgentHack material emphasizes a working prototype, a public GitHub repository, a demo video, a presentation deck, clear setup instructions, and meaningful use of UiPath Automation Cloud. The organizer follow-up email also asks the repository README to clearly state the project description, UiPath components, agent type, and setup instructions.

This repository now includes those README sections and this packet adds a compact environment proof trail. If judges strictly require an organizer-assigned staging URL, organizer confirmation is still needed.

UiPath Environment Identity

Field	Value
Base URL	https://cloud.uipath.com
Organization logical name	galacticus
Organization ID	1aa6cebf-ee8e-4fec-8520-b7971407d266
Tenant name	DefaultTenant
Tenant ID	360e9052-0ec2-4b79-b879-e6c7f992c443
Primary folder name	AgentFactoryDemo
Primary folder ID	7986306
Primary folder key	cba41e19-47cc-4a0a-bf73-de88b60a61be
Primary folder path	AgentFactoryDemo
Folder type	Standard
Folder description	Governed Agentic Automation Factory hackathon demo folder
Isolated solution folder	AgentFactoryDemoLiveSpine 1
Isolated solution folder ID	7989142
Isolated solution folder key	d991e64c-d0ad-4ec6-9798-8783b166a073

CLI Evidence

Read-only verification commands used on 2026-06-30:

```
uip login status --output json
uip login tenant list --output json
uip or folders get AgentFactoryDemo --output json
uip tm project list --limit 5 --output json
uip tm testsets list --project-key AFQG --output json
uip tm testcases list --project-key AFQG --output json
uip maestro bpmn process list --folder-key d991e64c-d0ad-4ec6-9798-8783b166a073 --output json
uip or processes list --folder-key d991e64c-d0ad-4ec6-9798-8783b166a073 --output json
```

Observed results:

- Login status returned Logged in for https://cloud.uipath.com, organization galacticus, tenant DefaultTenant.
- Tenant list returned DefaultTenant with tenant ID 360e9052-0ec2-4b79-b879-e6c7f992c443.
- Folder discovery returned AgentFactoryDemo with folder ID 7986306 and folder key cba41e19-47cc-4a0a-bf73-de88b60a61be.
- Test Manager project discovery returned project key AFQG.
- Test Manager test set discovery returned Customer360 Release Gate (AFQG:1).
- Test Manager test case discovery returned seven release-gate test cases.

- Maestro/Orchestrator process discovery returned the solution-deployed

process AgentFactoryMaestroSolutionBridgeSpine.Agentic.customer360-build version 1.0.1.

Product Summary

Governed Agentic Automation Factory turns a business request into a governed coding-agent build. A user asks for an internal business app, such as a Customer360 analytics dashboard. UiPath-shaped agents clarify requirements and governance. Human gates control scope and release. A manifest constrains the Codex worker. Tests and audit evidence decide whether the sandbox preview is safe to review.

The product solves the enterprise trust problem around coding agents: fast app generation is useful only when the organization can own the result, including data scope, PII policy, approvals, tests, release control, and audit.

End-To-End Workflow

```
business request
-> AI-generated clarifications
-> requirements/spec generation
-> governance assessment
-> scope approval
-> approved build manifest
-> API Workflow / Build Worker handoff
-> constrained Codex build
-> metric, PII, build, and smoke gates
-> release approval
-> Customer360 sandbox preview
-> evidence ledger
```

UiPath Components Used

UiPath component	Role	Evidence location
Maestro BPMN	Request-to-release orchestration spine for intake, agent work, human gates, build handoff, tests, release, deployment, and audit.	uipath/maestro/customer360-build/, solution deployment evidence docs
Agent Builder / UiPath Agents	Requirements, Clarification, Governance, Build Planner, and Test Summary agents.	uipath/agents/AgentFactoryAgents/
Coded agents / coded runtime	Server-side model-backed lifecycle endpoints for clarification, requirements/spec, governance, and build planning.	services/factory-api
UiPath for Coding Agents / Codex	Manifest-constrained coding-agent execution path for bounded repository work.	services/build-worker, docs/uipath-setup.md
Action Center	Scope/data and release approval contracts.	uipath/action-center/
API Workflows / Integration Service	StartBuildWorker, FetchBuildStatus, PostStatusUpdate, RecordTestResult, StartDeployment, and RecordUiPathEvent handoffs.	uipath/api-workflows/
Data Service	Proposed durable state and audit schema for requests, manifests, approvals, tests, deployments, and events.	uipath/data-service/schema.json
Orchestrator	Automation Cloud folder, process visibility, runtime boundary, and future assets/jobs.	docs/uipath-setup.md
Test Manager / Test Cloud	Live quality-gate catalog for Customer360 release evidence.	uipath/test-cloud/quality-gate-assets.json and read-only CLI checks
UiPath Apps	Companion intake/status contract for a future low-code operator surface.	uipath/apps/

Agent Type

The solution uses both low-code agents and coded agents.

- Low-code UiPath Agents: Requirements Agent, Clarification Agent, Governance

Agent, Build Planner Agent, and Test Summary Agent are represented as UiPath Agent Builder assets.

- Coded agents / coded runtime: Factory API lifecycle endpoints use

model-backed reasoning when Fireworks and LangSmith are configured.

- Coding agent: Codex is used through a manifest-constrained Build Worker

pattern with approved metrics, allowed files, forbidden actions, PII policy, sandbox-only deployment, and repair limits.

Agent And Workflow Responsibilities

Actor	Responsibility
Requirements Agent	Converts intent and answers into a structured app spec.
Clarification Agent	Identifies missing data, metric, PII, refresh, and ownership details.
Governance Agent	Assesses data policy, risk, approval requirements, and blocked actions.
Build Planner Agent	Produces the manifest that constrains the coding-agent worker.
Test Summary Agent	Summarizes quality-gate evidence for release approval.
Build Worker	Validates the manifest, records guardrail checks, queues Codex execution, and returns artifact evidence.
Factory API	Stores lifecycle state, receives trusted callback evidence, and exposes the evidence timeline.
Customer360 dashboard	Proves the generated app artifact with masked synthetic analytics.

Live UiPath Proof

Evidence	Value
Orchestrator folder	AgentFactoryDemo
Folder ID / key	7986306 / cba41e19-47cc-4a0a-bf73-de88b60a61be
Isolated solution folder	AgentFactoryDemoLiveSpine 1
Isolated solution folder ID / key	7989142 / d991e64c-d0ad-4ec6-9798-8783b166a073
Solution package	AgentFactoryMaestroSolutionBridgeSpine
Solution version	1.0.1
Solution package version key	53399a60-1edb-4d51-a054-29b17533932c
Solution deployment key	427de334-ba5e-4e95-bba1-d053abdad2f4
Pipeline deployment ID	0558837f-54a8-4526-10b1-08ded6011ef2
Activation status	SuccessfulActivate / active
Maestro process name	agent-factory-customer360-build
Maestro process key	AgentFactoryMaestroSolutionBridgeSpine.Agentic.customer360-build
Package process key	AgentFactoryMaestroSolutionBridgeSpine.Agentic.customer360-build:1.0.1
Release key	70d07489-d32a-4f56-9f5e-5fadaef8b14e6
Feed ID	e4c3d330-c071-4dc1-9bb9-9a18c65dfd83

Evidence	Value
Test Manager project	Agent Factory Quality Gates / AFQG
Test Manager project ID	2760d770-7e82-0000-66f7-0b49d3053e3f
Test set	Customer360 Release Gate / AFQG:1
Test set ID	66cdd3ea-c873-0200-58fb-0b49d305588a
Test case count	7
Codex readiness session	019f14f9-8e3b-7232-9d59-6ee2c428279f
Local product request ID	REQ-2026-001
Local build run ID	BUILD-REQ-2026-001-001
Local deployment ID	DEP-REQ-2026-001-001

Read-Back Verification

The evidence was read back with CLI discovery, not inferred from source files alone:

- `uip login status` confirmed the Automation Cloud organization and tenant.
- `uip or folders get AgentFactoryDemo` confirmed folder identity.
- `uip tm project list`, `uip tm testsets list`, and `uip tm testcases list`

confirmed live Test Manager catalog records.

- `uip maestro bpmn process list` and `uip or processes list` confirmed the solution-deployed Maestro process and Orchestrator process release metadata.

- The solution activation and Codex/build evidence are recorded in

`docs/orchestration/checkpoint-7/live-activation-evidence-2026-06-29.md` and
`docs/orchestration/checkpoint-7/maestro-solution-activation-evidence-2026-06-29.md`.

Judge Reproduction Path

1. Clone the repository:

```
git clone https://github.com/AbhinavGupta707/Ui-Path-Agent-Factory.git
cd Ui-Path-Agent-Factory
```

2. Install dependencies and run the local verification suite:

```
npm install
npm run smoke
```

3. Configure git-ignored local provider settings if available:

```
npm run setup:live
```

4. Start the full local product stack:

```
npm run dev:live
```

5. Open `http://localhost:5183`, submit the Customer360 request, review

clarifications, generate the build plan, approve scope, inspect live-run evidence, approve release, and open the Customer360 sandbox preview.

6. Optional read-only UiPath verification:

```
uip login status --output json
uip or folders get AgentFactoryDemo --output json
uip tm project list --limit 5 --output json
```

```
uip tm testsets list --project-key AFQG --output json
uip tm testcases list --project-key AFQG --output json
```

Submission File Recommendations

Upload Agent-Factory-UiPath-Evidence-Pack.zip as a supplemental Devpost artifact if the form allows attachments. If only one file can be uploaded, use Agent-Factory-UiPath-Environment-Evidence-Packet.pdf.

The ZIP contains:

- this PDF packet;
- this Markdown packet;
- machine-readable evidence manifest JSON;
- repository README;
- setup and component map docs;
- Devpost submission copy and checklist;
- hackathon requirements analysis;
- live activation evidence docs;
- UiPath setup and live-spine activation docs;
- demo recording script;
- submission deck;
- generated evidence pack README.

Safety, Privacy, And Boundaries

- The Customer360 dataset is synthetic.
- Names are tokenized; emails and phone numbers are suppressed.
- No real customer records, PHI, payer data, provider credentials, or live production systems are included.
- Provider keys, bridge tokens, .env.local, raw traces, generated build outputs, and local credential files are not included.
- Data Service schema creation and records remain approval-gated.
- Action Center task creation/completion remains approval-gated.
- Test Cloud execution remains approval-gated.
- Maestro solution deployment exists, but a full live process instance/job/task has not been claimed.
- The local sandbox preview is the app artifact; no public hosted sandbox URL is claimed in this packet.

Claim Boundary

This packet supports the claim that Agent Factory was built, verified, and documented in UiPath Automation Cloud with live folder, Test Manager catalog, and solution-deployed Maestro process evidence. It does not claim that the missing UiPath Labs staging URL was assigned, that production deployment was performed, or that live Action Center/Data Service/Test

Cloud mutations were run without explicit approval.
